

MORE RURAL PHARMACIES TO CLOSE

SMALL COMMUNITY PHARMACIES STRUGGLE TO SURVIVE

As more and more rural pharmacies close each year, AmiCare Pharmacy is now partnering with pharmacy owners and communities to preserve the local community pharmacy. Access to pharmacy services is an important rural health issue, and AmiCare is committed to you, the pharmacy owner, in delivering telepharmacy services. Your pharmacy can then remain a financially viable part of the community.

Highlights of our telepharmacy program include:

- Owner retains ownership of the pharmacy
- Use our technology at no cost when joining our group
- Receive back office support if you choose
- Improve profitability
- The technology allows your pharmacy to attract referring physicians and local customers.

Option 1

Allows your pharmacy to significantly reduce your cost of goods by joining with a larger buying group (AmiCare). This same buying group supports and implements the robust technology we utilize in each telepharmacy. In most pharmacies, we anticipate the savings in cost of goods will more than cover the costs associated with implementing telepharmacy!

Option 2

Our team implements only the telepharmacy solution, which can include access to a licensed Iowa pharmacist.

Benefits include:

- Autonomy for a well-trained, licensed and certified pharmacy technician
- Initial and ongoing training for staff and time sensitive technical support
- Support for your local community involvement

“I’m excited to be part of this important telepharmacy initiative in Iowa.”
